

CAR SALON

D.T.R.P.

Direct **Theft** **Repair** Program

Car Theft is on the rise in Calgary & a large number of them are cars contaminated with Methamphetamine & Fentanyl

ABOUT US

The Car Salon has years of experience with bio-cleaning vehicles, having dealt with all manner of vehicles, shapes, and sizes like cars, SUVs, vans, buses, trailers and more. You can count on us to provide immediate assistance in times of emergency by sanitizing or restoring your vehicle to pre-theft conditions.

THE SCENE

Drug use and misuse is a regrettable fact of life. In public places, such as alleyways and children's parks, we often see signs of drug use. The sight of used needles and other drug-related hazards can be alarming, especially when our kids might easily come across them. What is even more disconcerting is that because of drugs and drug paraphernalia vehicle thieves make our vehicles become unsafe scenerios. The Car Salon is routinely called for cases where a personal or commercial vehicle has been contaminated and left behind drugs, drug traces and/or remains.

WHAT WE DO

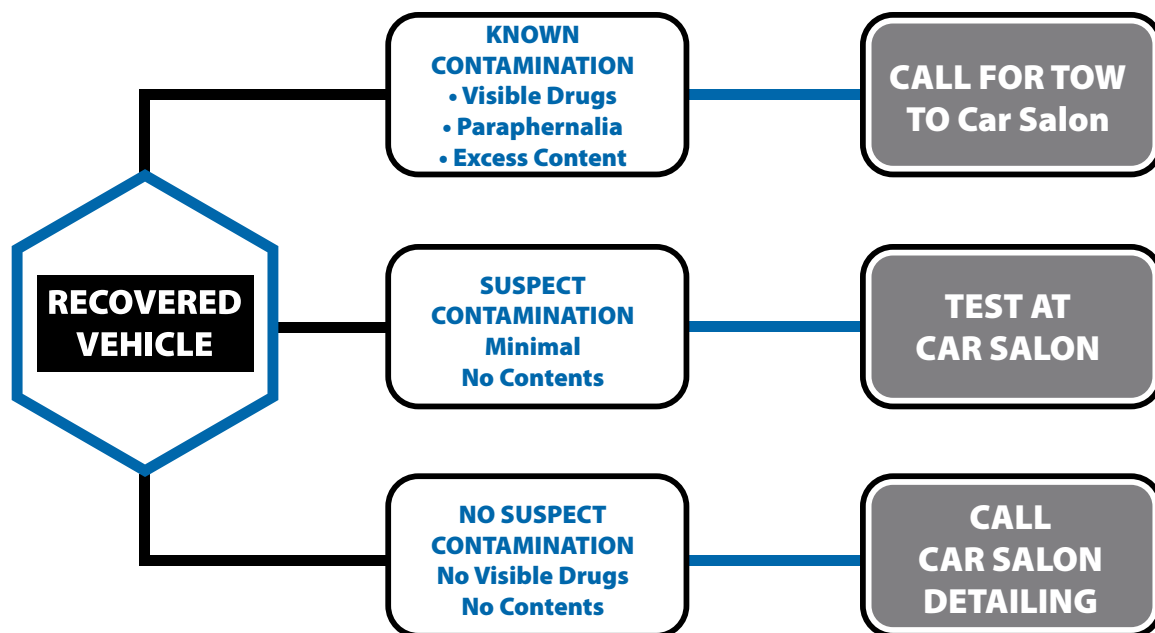

Any vehicle containing an unregulated or illegal drug should always be treated with extreme care, and should never be disposed of with general waste. Since remnants from drug use are not always obvious, a reputable company such as the Car Salon should be consulted to ensure that not only is the drug paraphernalia removed and properly disposed of, but that any toxic substances are cleaned away to keep you, your loved ones, and any other occupants safe.

THE DANGERS

When a drug user has contaminated your vehicle, the drug residue and unsuccessfully discarded drug paraphernalia, such as used needles, glass pipes, and baggies, can have permanent, adverse effects on the innocent. Anything as small as the hypodermic needle used can easily penetrate someone's skin, potentially endangering the health of the victim with unknown pathogens and drug residues. Broken crack pipes can cut the skin and cause infections, or allow traces of drugs to enter the bloodstream of an individual. And even a seemingly harmless object such as a baggie can contain ample drug residue to cause serious harm to children or pets.

The Car Salon remediates Vehicle Biohazard including car break-ins, removal of sharps, in addition to blood and biohazards in Calgary, Alberta.

The following chart is a guide on how to proceed in deciding the best course of action to be taken when a suspected stolen vehicle has been recovered or if it has possibly been contaminated by Meth or Fentanyl.

VEHICLE DRUG DECONTAMINATION

To decontaminate a harmful drug contaminated vehicle, our specialists follow these steps:

1. VISUAL INSPECTION FOR SHARPS

As soon as Juvenaire receives a suspected methamphetamine contaminated car, our technicians first need to inspect it for sharps.

2. PACKING PERSONAL ITEMS

If there are any personal goods remaining in the car, our team will take them away and store them in bags.

3. DRUG TESTING

The damages aren't physically visible. This is why, BEFORE proceeding with an expensive cleaning process it is very important to undertake testings to ensure whether the vehicle is contaminated or not. If the results come back positive, it is highly recommended that the car is professionally cleaned.

Note: Vehicle drug decontamination can be very expensive. Testing your vehicle could save you a lot of money.

4. POSITIVE DRUG TESTING

If the vehicle tested is contaminated by Meth or Fentanyl, the Car Salon hazardous cleaning team will provide a quotation along with a report to inform the insurance company of the costs.

5. CLEANING PROCESS

A Meth or Fentanyl contaminated car requires a thorough cleaning. To clean the toxic chemicals from methamphetamine, the seats need to be removed and treated. The interior of the auto is then disinfected and sanitised.

The vehicle may need to be treated several times depending on the level of contamination.

6. SECOND TESTING

It is very important to proceed with another testing after the cleaning of a Methamphetamine or Fentanyl contaminated automobile. This second testing will indicate to us if the car has been decontaminated and is ready to be handed back to the owner.

If you are the owner of a suspicious drug contaminated car, contact the Car Salon for further information and to obtain a quotation 403.250.3722 or info@thecarsalon.com
